WEB DESIGN

Pre Mid Term assignment - 30 marks

Design Replication with Code- Students are given an existing design to replicate in terms of “code”. The intention of this exercise is to make the students familiarize themselves with layouts & general syntax of the coding languages.

Post Mid term assignment - 30 marks

Building a Resume using Web Technologies- With all of the learnings gained from completing Assignment-1, students will build their own Resumes with Web Technologies(HTML5 & CSS3) that they have learned so far. This assignment will show till what extent a student can translate their existing resume’s design into Code.

End Term Brief- (40 marks)

Showcasing Crafts & Cluster Project – The students have already worked on a Crafts & Cluster project in their previous semester, but that was showcased in a Graphic Design format. The students will take the same project(same groups/different groups/individual) & showcase that in a web design format(with the Web Technologies they have learned). Students will be using Github as the code repository for submitting all the assignments.

Deliverables-

Create a Homepage(with at least one working link to any inner pages) by showcasing your Crafts & Cluster project in a design which is optimal for the Web. The home page should portray the use of background images, fonts(import from Google Fonts), layouts(using flexbox), navigation & theme(branding & colors) according to your Individual Crafts & Cluster Project.

Your “**Assignment_3**” folder must consist of the following files, folders & structure:

index.html	//Your main Home Page
main.css	//Your main CSS file that links to the Index.html page
reset.css	//Your CSS reset file linking to the Index.html page
inner_page.html	//Your secondary page(should be accessible from the home)

images //Folder that consists of all the images used in the webpage
svgs //Folder that consists of any svgs or assets that you may use
my_project //In this folder, place the final output of your Crafts & Cluster Project from your previous semester as a reference(mandatory!)

Note*: *Once your assignment is completed, you must push the above format & its code into your own Github repository.*

Evaluation Criteria (concept & execution)

- Project Structure + Pushing code to Github + Linking all files & assets correctly- **10 marks**
- Coding the website using the Web Technologies taught as necessary- **20 marks**
- Design & Usability of the final output – **10 marks**
